The closest prior arts of record, i.e. Beadle, Gee, taken alone or in combination, fail to teach or fairly suggest at least: an embedded multiple independent virtual machine environment wherein the builder tool builds multiple applications into an executable image to run in a multiple virtual machine environment having concurrently-running virtual machines...to perform a prioritized search based on how the parameter was defined as recited in the independent claim 47 and an overview component...depicting a plurality of virtual machines of an embedded virtual machine environment having concurrently-running virtual machines...the builder tool builds multiple applications into an executable image to run in a multiple virtual machine environment having concurrently-running virtual machines as recited in the independent claims 1 and 48.

While Beadle discloses selecting a virtual machine for use with a browser and Gee discloses a multiple Java virtual machines operating on a single processor, Beadle and Gee, taken alone or in combination, do not disclose an embedded multiple independent virtual machine environment wherein the builder tool builds multiple applications into an executable image to run in a multiple virtual machine environment having concurrently-running virtual machines...to perform a prioritized search based on how the parameter was defined as recited in the independent claim 47 and an overview component...depicting a plurality of virtual machines of an embedded virtual machine environment having concurrently-running virtual machines...the builder tool builds multiple applications into an executable image to run in a multiple virtual machine
